The present sequence represents a peptide sequence found in compounds based on protegrins and tachyplesins, designated tachytegrins and parevins. The present sequence is from a tachytegrin as the peptide has parevine at positions at positions a manaly and 17, where parevins have Cys residues at positions 5 and 16 Both compounds can be used as preservatives (e.g. positions 5 and 16 Both compounds can be used as preservatives (e.g. in foodstuffs, cosmetics or medicaments) or in treatment of viral or microbial infection in animals or plants. They are useful, e.g. in treatment of oral mucositis, infection by Staphylococcus aureus, treatment of oral mucositis, infection with the animals of those caused by Chlamydia trachomatis, Treponema pallidum, Neisseria gonorrhoeae, Trichomonas vaginalis, Herpes simplex type 2 and HIV. DNA encoding the compounds can also be expressed in situ, in animals or plants, to combat infections. The compounds can also be used as standards in antimicrobial assays and in binding endotoxins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Synthetic.

                        This peptide represents a linear derivative of the tachyplesin family of peptide antibiotics. Tachyplesin antibiotics form part of the peptide antibiotic family which contain a beta-sheet secondary structure linked by disulphide bridges. The new derivatives are linear and lack the agents on organism, e.g. therapeutic proteins, antibodies (or their fragments), nucleic acid, oligonuclectides, ribozymes, antibudua agents, antivirals and anti-inflammatories, etc. The derivatives are non-toxic and non-lytic but can cross mammalian cell membranes rapidly by a passive including crossing the blood-brain barrier.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cpds. based on protegrin(s) and tachyplesin(s) - designated tachytegrin(s) and parevin(s), useful as antimicrobial and antiviral agents, e.g. for treatment of sexually transmitted diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Protegrin; tachyplesin; antimicrobial; antiviral; oral mucositis; sexually transmitted disease; endotoxin; HIV; Staphylococcus aureus; Pseudomonas; H. pylori; Chlamydia trachomatis; Treponema pallidum; Nelsseria gonorrhoeae; Trichomonas vaginalis; Herpes simplex type 2; animal; plant.

  Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
         parevins. The present sequence is from a tachytegrin as the peptide has Cys residues at positions 4 and 17, where parevins have Cys residues at positions 5 and 16. Both compounds can be used as preservatives (e.g. in foodstuffs, cosmetics or medicaments) or in treatment of viral or microbial infection in animals or plants. They are useful, e.g. in freatment of oral mucositis, infection by Staphylococcus aureus, Pseudomonas or H. pylori, or sexually transmitted diseases, including those caused by Chlamydia trachomatis, Treponema pallidum, Neisseria gonorrhoeae, Trichomonas vaginalis, Herpes simplex type 2 and HIV. DNA encoding the compounds can also be expressed in situ, in animals or plants, to combat infections. The compounds can also be used as standards in antimicrobial assays and in binding endotoxins.
                                                                                                                                                                                                                Gaps

AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; sequences have activities such as: cytostatic; hepatotropic; vulnerary; costeopathic; antiparterin; antiarthritic; immunosuppressant; costeopathic; antibacteris, thrombolythc; coaqulant; vasotropic; antidiabletic; hypotensive; dermatological; immunosuppressive; antidiabletic; hypotensive; dermatological; immunosuppressive; antithroral; and antibacterial; antiviral; antifungal; antirhematic; antithroral; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating the presence of or predisposition to, or preventing or treating to nucleic acides can be used to express ORRX proteins in gene therapy nucleic acides can be used to express ORRX proteins in gene therapy vectors. The proteins and nucleic acides may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel polynucleotide isolated from human immunodeficiency virus type 1 subtype C/B' which can be used for the immunodeficiency virus type 1 subtype C/B' which can be used for the induction of specific humoral and cellular immune responses. (I) and induction of specific humoral them, are useful in pharmaceuticals, vaccines and diagnostic agents, particularly for treatment or prevention of human immune deficiency virus.) HIV-1) infections, also for rational of human immune deficiency virus. (HIV-1) infections, also for rational continuation of thest or therapeutic reagents, or gene therapy vectors.

The polypeptides, especially antibodies, specifically directed against (II) are similarly useful as pharmaceutical and diagnostic agents. (I) are specific for intersubtype C/B' of HIV-1 so are useful in regions (particularly china and South-East Asia) where this subtype is prevalent. The products of the invention have antiviral activity. This sequence crepresents a protein encoded by the HIV-1 subtype C genome described in the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and
hypertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, bacterial or fungal infection, malaria, autoimmune disorders, asthma, allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, nocturnal haemoglobinuria, antiinflammatory disease; to enhance coagulation; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                  Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dr primer and an oligonucleotide complementary trand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination
inmunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the pertipheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral nervous that a coalised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, activity, chemocactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                           The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; primer; detection; diagnosis; antisense therapy; gene therapy.
                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Saito K, Yamamoto J;

of an oligonucleotide comprising a sequence complementary to the comprises a 5'-end comprementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a sequence and an oligonucleotide comprises a 3'-end sequence, where the polynucleotide which comprises a 1'-end sequence, where the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and the primers are useful for synthesising polynucleotides, in gene therapy. The primers are useful for synthesising polynucleotides, in gene that the full-length cDNAs. The primers are also useful for the centerion and/or diagnosis of the abnormality of the proteins encoded by detection and/or diagnosis of the abnormality of the proteins encoded by constant and specialised methods. AAB93446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 or represent human amino acid sequences; and AAH13629 to AAH13632 or the constant in the exemplification and an account of the constant of t

                                                                                                                                                                                                                                                                                           ö
                                       The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM3642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the Activity and Shy-Drager Syndrome other uses include the Activinhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic utilisation of the activities such as: Immune system suppression, Activino, inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                          The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

The present sequence is a polypeptide encoded by one of a large number of 5. ESTs derived from mRNAs encoding secreted proteins. The 5. ESTs cof 5. ESTs derived from an RNAs encoding secreted proteins. The 5. ESTs set prepared from total human RNAs or polyA+ RNAs derived from 30 this ferent issues. EST sequences usually correspond mainly to the 3. Compared region (UTR) of the mRNA because they are often obtained untranslated region (UTR) of the mRNA because they are often obtained isolating cohn sequences derived from the 5. ends of mRNAs and even in isolating cohn sequences have been obtained, the full 5. Those cases where longer cDNA sequences have been obtained, the full 5. The isolating can therefore be used to obtain full length cDNAs and genomic DNAs. 5. ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream chromosome mapping procedures. They are used to obtain upstream credition vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Plant; transcription factor; gene expression; eucalyptus; pine; acacia;
                                                                                                                                                               expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eucalyptus grandis transcription factor protein sequence #234.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or more vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the plant. This protein is encoded an isolated human sequence which has homology to the Arabidopsis thallana VRN2 gene over a short region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to novel plant transcription factors from Eucalyptus gradis or Pinus radiata. The present sequence is one such transcription factor. The transcription factor may be used to produce a plant having modified gene expression such as a woody plant e.g. a eucalyptus, pine, acacia, poplar, sweetgum, teak, or mahogany species or to modify the activity of a polypetide in a plant. The transcription factors of the present invention are members from the following families of regulatory proteins: bZIP, bZIP family of G-box binding factors, belix:loop-hell: xipper, homeotic/homeodomain/homeobox/MADS, homeodomain cypper, LIM domain, AP2 and ERBS, zinc finger domains of type 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated polynucleotide encoding a plant transcription factor for producing a plant e.g. a woody plant, preferably eucalyptus or pine, having modified gene expression or modified activity of a polypeptide
poplar; sweetgum; teak; mahogany; bZIP; G-box binding factor; basic helix-loop-halix zipper; homeotic; homeodomain; homeobox; MADS; homeodomain zipper; LIM domain; AP2; EREBS; zinc finger domain; type 2 Cys2His2; CCAAT box element; MXB.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       potassium channel; drug screening; hypertension;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of human TASKI (TWIK-related acid-sensitive K+ channel), a member of a new family of 2P domain potassium channels, also including TWIK-1 (see AAY79673) and novel TASK2 (see AAY79675). TASKI is expressed in many different tissues, and at particularly high levels in pancreas and placent for substances that modulare the activity of members of the TWIK-1 family members can be used to screen for substances that modulate the activity of members of the TWIK-1 family of potassium channels. The drugs identified may be useful in the treatment of diseases of the heart or of the nervous system, such as epilepsy, arrhythmia, vascular diseases,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 neurodegenerative diseases, kidney, liver or pancreas diseases, hypertension, diseases associated with ischaemia or anoxia, endocrine diseases associated with anomalies of hormone secretion,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAZ AAZ98109 to AAZ98242 encode AAX87224 to AAX87357 which represent the buman signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have human signal peptide-containing proteins HSPP-1 to HSPP-134. HSPPs have controlled and entiasthmatic activities, and can neuroprotective, cardiovascular and antiasthmatic activities, and can neuroprotective, cardiovascular and antiasthmatic activities, and can sociated with decreased activity or function of HSPP. Such diseases include cell proliferation of HSPP. Such diseases include cell proliferation (including cancer), inflammation, cardiovascular, neurological, cirphoductive or developmental disorders, (e.g. arteriosclerosis, corperated promental disorders, (e.g. arteriosclerosis, carthosis, psoriasis, acquired immune deficiency syndrome, anaemia, circhosis, and prosection of the recombinant production of HSPP, cor genetic variations, and for chromosomal mapping, HSPP are also used to antagonists (potential therapeutic agents). Ab are used to diagnose, or antagonists (potential therapeutic agents). Ab are used to diagnose, or antagonists, in competitive drug screens, and for purification of HSPP. Cor general sources.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
